

Notifier Australia VeriFire Tools Software Release V9.20

NOTIFIER is pleased to announce the release of Notifier Australia VeriFire Tools V9.20.

This Service Pack provides the following changes;

Resolved issues:

- Added Alarm Delay Facility, configurable from 30 to 300 seconds.

Resolved issues:

- Corrected issue related to *Reminder Time* (General Setting2) and resolved discrepancy between Excel export report and General settings.
- Corrected issue related to AAM Acknowledgement Period setting when upgrading a 23 database to 24.

Compatibility:

- This release supports the software databases used in V23.10 of the AFP-3030/NCA-2 firmware. Future database revisions are not supported by this software.
- This software is compatible with windows 7, windows 8, windows 8.1 and windows 10.

This software is not compatible with windows XP

Installation Steps:

- Download the file from <http://www.notifier.com.au/download-centre/software-tools.html> and select VeriFire Tools (Australian v9.20)
- Run the exe file supplied.

Please contact your NOTIFIER technical support for any technical questions.
